Qlik GeoAnalytics Server Changelog

Contents

Introduction

This document provides a list of changes that are global to all modules in the server. For changes that only concerns a particular module, see the changelog in the documentation of the module in the distribution.
For requirements and installation guide see the documentation page.

November 2019 (4.18.4.2074df3) 2019-10-08

Files

Bugfix: The GetResource endpoint now has more restrictions on allowed protocols.

4.18.3.678b373 2019-09-26

Bugfixes and improvements in the WebMap5 and Geocode modules.

Note:
You can now specify CORS rules for blocking IP addresses when getting external files through the WebMap5 and GeoAnalytics modules.
You can now specify the maximum size of files to serve through the GetResource endpoint.

4.18.2.7f62057 2019-09-17

Bugfix in the GeoAnalytics module.

September 2019 (4.17.2.1520fe7) 2019-09-02

Updated GIAGA

4.18.1.be5f3b7 2019-08-29

Files

Bugfix: Fixed issue where WebMap5 was broken if behind a load balancer on AWS.

4.18.0.2dc5618 2019-08-29

Bugfixes and new features in the GeoAnalytics and WebMap5 modules.

4.17.1.36e7278 2019-08-19

Bugfix in the WebMap5 module.

4.17.0.acfb252 2019-07-03

Bugfixes and new features in the GeoAnalytics module.

Fixes

Bugfix: Did not set content type when sending internal resources via GetResource.

June 2019 (4.16.0.b07d0fe) 2019-05-14

Bugfixes in the GeoAnalytics module.

April 2019 (4.15.0.4831cac) 2019-03-11

Bugfixes and new features in the WebMap5 module.

Bugfix in the Route2 module.

February 2019 (4.14.0.fd601e8) 2019-01-09

Bugfixes and new features in the GeoAnalytics and WebMap5 modules.

Bugfix in the Route2 module.

4.13.0.3272dfa 2018-10-24

Bugfix in the GeoAnalytics module.

November 2018 (4.12.1.83eeb86) 2018-10-23

Bugfix in the WebMap5 module.

4.12.0.b29b8f9 2018-10-12

Bugfixes and new features in the GeoAnalytics and WebMap5 modules.

Tested with Java 11.

September 2018 (4.11.1.fdb87bb) 2018-09-11

Bugfixes in the GeoAnalytics and WebMap5 modules.

September 2018 (4.11.0.4b896ea) 2018-08-07

Bugfixes and new functionality in the WebMap5 module.

Changes

Lowered the log level of LED server connection errors for server licenses check.

June 2018 (4.10.4.66358c6) 2018-06-11

Bugfixes in the WebMap5 module.

4.10.3.13d49a9 2018-05-30

Bugfix in the WebMap5 module.

4.10.1.bd36679 2018-05-25

Bugfix in the WebMap5 module.
Bugfixes in the Access, Route2, GeoAnalytics, and WebMap5 modules.

Changes
Default max memory in installer bumped to 15GB.

Fixes
Bugfix: Accessing /ravegeo/ on the installer version would show files in the root webapp folder though would only leak version no.

April 2018 (4.9.0.01c4d33) 2018-03-21

Bugfixes in the Map2, GeoAnalytics, and WebMap5 modules.
New functionality in the WebMap5 module.

Fixes
Bugfix: Synchronous memory leak on exception in the LEF connection class.
Bugfix: Uploded location of the X-Forwarded-For header.
Bugfix: Log level adjustments. No longer logging useless information at a few places.

New
Now you can now pseudo anonymize logged IP addresses and referrer headers with a new config setting.

Fixes
Bugfix: Fixed getting IP address via the X-Forwarded-For header.

February 2018 (4.7.3.5d1eb83) 2018-01-25

Fixes
Bugfix: WebMap5 API docs were not included in the build.

4.7.2.0568a05 2018-01-23

Bugfixes in the WebMap5 module.

4.7.1.b1c290b 2018-01-16

Bugfix in the WebMap5 module.

4.7.0.d5e121a 2018-01-15

New functionality in the WebMap5 module.

Fixes
Bugfix: WebMap5 API docs were not included in the build.

November 2017 (4.5.1.4fd8c5b) 2017-10-09

Fixes
Bugfix: Bugfix in the Route2 module.

4.5.0.99a0eea 2017-10-05

New functionality in the GeoAnalytics and WebMap5 modules.

Fixes
Bugfix: Bugfixes in the GeoAnalytics module.
Bugfix: Bugfixes in the Route2 module.
Bugfix: Bugfixes in the Vector module.
Bugfix: Bugfixes in the WebMap5 module.

4.4.2.64d487d 2017-09-26

Changes
Changed version of jetty from 9.2.22 to 9.2.23 for the installed version to keep Java 7 compatibility.

Fixes
Bugfix: Bugfixes in the Geocoding module.

4.4.1.ff6602d 2017-09-13

New
GZIP compression enabled by default for the installed version.

Fixes
Bugfix: Bugfixes in the GeoAnalytics module.
Bugfix: Bugfixes in the Vector module.
Bugfix: Bugfixes in the WebMap5 module.

4.3.1.31260 2017-06-12

Fixes
Bugfix: Bugfixes in the Access module.
Bugfix: Bugfixes in the GeoAnalytics module.
Bugfix: Bugfixes in the Geocode module.
Bugfix: Bugfixes in the Route2 module.
Bugfix: Bugfixes in the WebMap5 module.

4.3.0.31134 2017-03-29

New
Idevio Server is now Qlik GeoAnalytics Server.

Remanbering of QAD, QPA, and qmap

Changes
New field to get request IP from the X-Forwarded-For header before using the actual request IP.

This version has new default install paths.

Fixes
Bugfix: The installer would double the number of backslashes in the path to the key store in upgrade.
Bugfix: Installer did not reset QAD (Qlik Diagnostics) path when re-installing.
Bugfix: The installer did not create the **{SERVER_HOME}\server3\logs** causing initial daemon logs not being written.

4.2.1.30704 2016-12-14

This version contains new features in GeoAnalytics and the WebMap5 Module: All modules includes bugfixes.

Changes
Updated external license and attribution information.
Renamed services to jars.

Fixes
Bugfix: Fixed issue in how a modules services are loaded when a module is reinstalled.

4.2.0.30408 2016-10-07

This version contains new features in GeoAnalytics, Geocode and the WebMap5 Module: All modules includes bugfixes.

New
Service entries in the service config GUI are now marked gray if their module is not running.

Changes
Now using SHA-256 for digests and timestamps when signing executables for the installer.

Fixes
Bugfix: Installer would reset service settings on update.
Bugfix: Adding a default service through the GUI would make it be saved with name in the service config, even if it shouldn’t have one.
Bugfix: Fixed removal of invalid memory leak.
Bugfix: Server GUI menu did not get a scroll bar when low on vertical space.
Bugfix: Service config GUI did not update on module license add / remove.
Bugfix: CORS headers were not set on some responses to failed requests.

4.1.2.29562 2016-06-03

This version contains new features in Geocode and the WebMap5 module.

New
You can now load MultiAlias configs directly via the Add Services dialog.

Changes
Installer is now smarter when upgrading.
Installer version of the server now unpacks to ProgramData\IdevioServer\war\.

Fixes
Bugfix: Old alias pages not updating on service changes.
Bugfix: Fixed an unhandled exception in the GUI when adding a service that was not active or had failed.
Bugfix: Adding service collections containing a broken service config would lead to an incomplete failed load rather than no load at all.
Bugfix: Bugfixes in the Access module.
Bugfixes in the WebMap5 module.

4.1.1.29443 2016-05-13

New
This version contains new features in GeoAnalytics module.

New
You can now load service data files containing references to other service collections.

Changes
You now can load service data files containing references to other service collections.

Fixes
NPE when trying to remove a service whose config file had moved.

4.0.3.28802 2016-03-03

New
H2 driver jar is now included.

Fixes
Bugfix: Bugfixes in the Map Module.
Bugfix: Bugfixes in the Geocode Module.
Bugfixes in the WebMap5 Module.

4.0.2.28682 2016-02-23

New
You can now load service data files containing references to other service collections.

Changes
Made server more reliable to errors in services on start.

Fixes
Bugfix: NPE when trying to remove a service whose config file had moved.

4.0.1.28058 2015-12-02

Fixes
Bugfix: Server now starts even if a configuration file is missing.

4.0.0.27821 2015-11-12

New
Switched to Java 7.

Changes
Admin interface now completely done in Vaadin. No longer using Dojo.

Fixes
Switched Vaadin Frame.

4.0.0.27821 2015-11-12

New
Switched to Java 7.

Changes
Admin interface now completely done in Vaadin. No longer using Dojo.

Fixes
Switched Vaadin Frame.
3.6.1.26571 2015-06-10
New
- New features and bugfixes in WebMap Module.
- CORS headers set on WMS images.

3.6.0.26458 2015-05-28
New
- New features and bugfixes in WebMap Module.
- New API in Map Module.

Fixes
- Bugfix: Bugfixes in Geocode Module.

3.5.1.25127 2014-12-05
New
- New features and bugfixes in Geocode Module.
- New API in Map Module.
- Fixtures in Route Module.

Fixes
- Bugfix: Bugfixes in Route Module.

3.5.0.24381 2014-05-28
New
- New includes the WebMap5 Module!

3.4.7.23962 2014-01-28
Fixes
- Bugfix: Bugfixes in Route Module and changed logging in Map Module.

3.4.6.23848 2013-12-16
New
- New certificate in WebMap applet. Note! Old certificate expires 2014-02-26! Everyone using the WebMap applet must upgrade before this date.

Fixes
- Bugfix: Bugfixes in Map Module and WebMap Module.

3.4.5.23759 2013-11-06
New
- Better support for latest Java in WebMap applet.
- Improvements in Map Module for WMS and tiles (GetTile).

Fixes
- Bugfix: Bugfix in Map Module and WebMap Module.

3.4.3.23505 2013-07-12
New
- Applet now shows all certificates when getting symbol images over HTTPS.

Fixes
- Bugfix: This is a WebMap bugfix release.
- Bugfix: Fix for applet name being set to map name instead of RaveGeo WebMap.

3.4.2.23489 2013-07-04
Fixes
- Bugfix: This is a WebMap bugfix release.
- Bugfix: Fix for the latest Java in WebMap applet.

3.4.1.23307 2013-04-25
New
- WebMap now animates panning.

Fixes
- Bugfix: Various bugfixes.

3.4.0.23203 2013-03-12
New
- Threading has been improved.
- Fix for the issue of module where initialization failed.
- Data can now be processed via a listener in WebMap.
- Fix for handling complex feature standards.

3.3.1.22766 2012-10-10
Fix in WebMap for novice problems.

3.3.0.22706 2012-08-17
New
- Geocode Module improved with better ranking calculations, easier interpretation of results and made, new changeling for Geocode Module.
- Minor documentation fixes.

Fixes
- Bugfix: Bugfix in Map Module, see changeling for Map Module.

3.2.10.22634 2012-06-18
This is a bugfix release, see changeling for WebMap Module and Map Module.

3.2.9.22453 2012-04-04
See changeling for Map Module, Route Module and WebMap Module.

3.2.8.22183 2012-02-07
New
Improved document structure for idevio developer site.
See changing WebMap Module.

3.2.7.21790 2011-11-24

Fixes
Bugfix:
Admin UI now forces IE8 compatibility mode in IE9+

3.2.6.21736 2011-11-16
See changing for Geocode Module, Map Module and WebMap Module.

3.2.4.20764 2011-09-08
New
NewMapViewer is now included in server distribution under tools/mapviewer.
All legacy FinderTextStyle.* is now available in main log.
New format of this changelog is to allow for better readability in each entry.
See changing for Geocode Module, Map Module, Vector Module and WebMap Module.

Changes
Log files are now always in UTF-8 To avoid mixed encoding. Please stop the server, copy the logs you want to keep and then remove all logs from the server home folder.

3.2.3.19995 2011-07-01
New
Documentation encoding is now interpreted correctly also in Internet Explorer.
See changing for Geocode Module, Map Module and WebMap Module.

3.2.2.19825 2011-06-07
New
Display name for ravegeo.war now contains the version number.
See changing for Geocode Module, Map Module, Route Module, Vector Module and WebMap Module.

Fixes
Bugfix:
Changing the log level did not take effect until server was restarted.

3.1.7.17072 2010-10-28
See changelog for Geocode Module.

3.1.6.16804 2010-10-07
See changelog for WebMap Module.

3.1.5.16442 2010-09-24
See changelogs for Geocode Module, Map Module, Route Module, WebMap Module.

3.1.4.15271 2010-06-30
New
Access log files are now closed when modules are stopped.
See changelogs for Geocode Module, Map Module, Route Module and WebMap Module.

Changes
Log files are now allowed to grow 500KB instead of only 200KB.

3.1.3.14735 2010-05-13
New
More information is now available in the server Java documentation.
Updated version numbers in documentation to match the actual versions.
See changelog for Geocode Module, Map Module, Route Module, Vector Module and WebMap Module.

Fixes
Bugfix:
Could get exceptions in log when shutting down.

3.1.2.14538 2010-04-29
See changelog for latest WebMap module.

3.1.1.14531 2010-04-26
New
Various documentation fixes.
Log file names are now ordered in logical order in the administration interface.
See changelogs for Geocode Module, Map Module, Route Module and WebMap Module.

Changes
Log files are now allowed to grow to 500KB instead of only 200KB.
New
Now possible to set RAVEGEO_SERVER_HOME via a Java system property.

Changes
Java API for plugins has changed, please recompile your plugins.

Fixes
Bugfix: Server could fail to start if a module failed to start by throwing java.lang.Error exceptions.

See changelogs for Geocode Module, Map Module, Route Module and WebMap Module.

3.0.4.13374 2009-11-25
See changelogs for Geocode Module, Map Module, Route Module and WebMap Module.

3.0.3.12064 2009-08-31

Fixes
Bugfix: ravegeo.server.vectormodule.DynamicDataSource was missing from the server API.

3.0.2.11651 2009-07-22

New
Now possible to use RaveGeoReader and RaveGeoMapClient from plugins.

Changes
Plug-ins should now be linked against server.jar instead of server-api.jar.
Log file is now split into smaller parts.

Fixes
Bugfix: ravegeo.server.vectormodule.DynamicDataSource was missing from the server API.

3.0.1.11177 2009-05-25

New
Version with mainly small bugfixes. New features are available in the following modules.
GeocodeModule: It is now possible to specify a type with each address new to narrow down the hits.
MapModule: Aliases now supported for WMS.
VectorModule: Added support for reply with route in XML or JSON.

Fixes
Version with mainly small bugfixes. New features are available in the following modules.
GeocodeModule: It is now possible to specify a type with each address new to narrow down the hits.
MapModule: Aliases now supported for WMS.
VectorModule: Added support for reply with route in XML or JSON.

3.0.0.10820 2009-04-27

First delivered version with all modules in one web application.
