

QlikView® 11.20 SR16 – Release notes

Updates

QlikView 11.20 SR16 contains the following updates:

TLS 1.1 and 1.2 support

QlikView 11.20 SR16 adds support for TLS1.1 and 1.2. It is now possible to disable usage of TLS1.0/1.1. Because of this change, the .NET requirement is now version 4.5 or higher. Detailed instruction on how to configure TLS is available from Support on request.

Changed quarantine of Named user CAL to 7 days

The quarantine period of a named user has been changed from 24 hours to 7 days

Internet Explorer Plugin

Windows 10 / Internet Explorer 11 and the ActiveX Plugin are now fully supported.

Bug fixes

QlikView 11.20 SR16 fixes the following issues entered in Jira:

Invalid data seen in document after reload from QMC

Jira issue ID: QVII-1274

AllowExecuteCommand not working in QlikView Batch

Jira issue ID: QVII- 1470

Description: When distributing a QVW file with AllowExecuteCommand set to 1, command was not executed.

Script function evaluate() causes QV Desktop freeze

Jira issue ID: QVII- 1500

Description: Use of the script function evaluate() causes a document in QlikView Desktop to freeze.

Memory “ballooning” issue when Dimension field set as Expression

Jira issue ID: QVII- 1356

Description: A memory usage problem arises in a QVW when a dimension field is set as an Expression.

QlikView 11.20 SR16 – Release notes 1

Combo chart “Updating...” error when using scroll wheel

Jira issue ID: QVII- 1423

Description: A combo chart triggers the message "Updating, please try again" when using a scroll wheel to navigate it.

Incorrect chart expression behavior in SR15

Jira issue ID: QVII- 1349

Description: When viewing chart properties under expressions, hover details appear in chart instead of popup.

Pivot Table: expanded columns collapse after reload

Jira issue ID: QVII- 274

Description: After reload, the expanded columns in a pivot table collapse.

No refresh in AJAX when ShowRefreshDoc set to 1

Jira issue ID: QVII- 1192

Description: AJAX is not refreshed when initiated, even when Settings.ini value ShowRefreshDoc=1.

Container object sometimes causes a server crash

Jira issue ID: QVII- 177

Description: A container object sometimes causes a server crash.

Wrong system requirements shown for SR14

Jira issue ID: QVII- 1172

Description: The link to the system requirements for SR14 went to the system requirements for SR13.

Selections not preserved when swapping between documents

Jira issue ID: QVII- 992

Description: When swapping between QlikView documents, selections from the original documents are not preserved when returning to the original document.

Message “Error in expression” shown incorrectly

Jira issue ID: QVII- 965

Description: When using a label defined in a different expression, “Error in expression” message is displayed even if syntax is correct

Incorrect link to define server name in Small Device version

Jira issue ID: QVII- 425

Description: When editing the URL to define server name in Small Device version, resulting link is not correct.

Better handling of CPUID function 0x80000006

Jira issue ID: QVII- 1303

Description: Freezes in QlikView Server and QlikView Desktop occur after the first load statement of all documents. Requires better handling of CPUID function 0x80000006.

Node 4 clusters showing no QVWs

Jira issue ID: QVII- 1291

Description: CLONE - Two 4 Node QVS Clusters show no QVWs on the Access point when one Cluster is brought down while the other remains up.

QlikView Distribution Service memory leak

Jira issue ID: QVII- 1287

Description: Functionality associated with "Process Summary Gatherer" causes QlikView Distribution Service memory leak.

ServerTempBookmarkDayTimeout causes file lock errors in cluster

Jira issue ID: QVII- 1286

Description: The function ServerTempBookmarkDayTimeout works, but runs into cluster errors.

NullRefererException error when running QMS API program

Jira issue ID: QVII- 1260

Description: Occasionally, when the QMS API is run, the NullRefererException error occurs.

"Allow only one copy of document in memory" not working as expected

Jira issue ID: QVII- 1246

Description: When unchecking "Allow only one copy of document in memory" and using default settings on the QVW document, server does not wait.

"Always only one value" causes Engine crash

Jira issue ID: QVII- 1236

Description: When applying "Always only one value", the Engine crashes when restoring a snapshot (when applying a bookmark or moving forward and back).

Second reload fails with error: The source document failed to save

Jira issue ID: QVII- 1223

Description: Second reload fails with error: The source document failed to save.

QlikView cannot load text file

Jira issue ID: QVII- 957

Description: A simple text file cannot be fully loaded into memory. It is fully read but QV hangs after the physical read.

Security Vulnerability. Vulnerable jQuery 1.7 java script library

Jira issue ID: QVII- 623

Description: Security vulnerabilities with QlikView identified by running Security tool, acunetix.

Text on axis display for bar chart overlapping

Jira issue ID: QVII- 1193

Description: Expressions which calculate the percentage of sales for each quarter for the years displayed in a bar chart on the Y axis have values overlapping on top of each other.

QVS stops working after Windows Update on Server 2012 R2 with certificates

Jira issue ID: QVII- 1105

Description: QVS stops working after Windows Update on Server 2012 R2 with certificates.
