---

## BUG FIXES INCLUDED IN QLIKVIEW 12.10 SR1:

---

### **Early release version of the software**

Jira issue ID: QV-8864

Description: After installation, incorrect information on End User License Agreement Windows is shown.

### **Pivot table partial sum disappears when doc properties are changed**

Jira issue ID: QV-8393

Description: Pivot table partial sum disappears when doc properties are changed.

### **Multiple instances of QvConnect64.exe launched by the QVS**

Jira issue ID: QV-8268

Description: The QVS.exe re-creates multiple QvConnect folders and multiple instances of QvConnect64.exe in the Task Manager.

### **Memory “ballooning” issue when Dimension field set as Expression**

Jira issue ID: QV-7910

Description: A memory usage problem arises in a QVW when a dimension field is set as an expression.

### **Incorrect chart expression behavior**

Jira issue ID: QV-7885

Description: Since QlikView 11.20 SR 15, When viewing chart properties under expressions, hover details appear in the chart instead of the popup.

### **Straight table will not wrap text when printing in AJAX client**

Jira issue ID: QV-7427

Description: When printing in AJAX client, a straight table will not wrap text if the field starts with a number and a dash (1-).

### **OMIT fields in section access the fields can be referenced in set analysis**

Jira issue ID: QV-6883

Description: Despite using the OMIT fields in section access, the fields can be referenced in set analysis.

### **Unable to load text file**

Jira issue ID: QV-6677

Description: A simple text file cannot be fully loaded into memory. It is fully read but QlikView hangs after the physical read.

### Reduced slider object size has no automatic increase in step size in WebView

Jira issue ID: QV-5435

Description: When a slider object size is reduced, the step size is automatically increased in desktop, but not in WebView.

### Calendar day names wrong in Russian language

Jira issue ID: QV-4993

Description: In a calendar object, for Russian, the names of weekdays in WebView are presented as default and not as in the load script, which is correct way.

### Field event Trigger not showing action on Field

Jira issue ID: QV-904

Description: Field Event Trigger should display which fields has trigger without having to open/close the document.

### All data exported to CSV when there are over 65501 rows

Jira issue ID: QV-371

Description: All data exported to CSV, even selected items, when there are over 65501 rows. Exported csv file should be contained narrowed-down data only.

## SECURITY CONFIGURATION: RECOMMENDATION

---

### Header injection protection

Since QlikView 12.00 SR5, protection against header injection attacks has been available. It is a QlikView Web Server feature, but is disabled by default. To enable it, change the value of the *EnableHeaderChecking* configuration option in *QVWebServer.exe.config* to *TRUE*. This configuration file can be found in *Program Files/QlikView/Server/Web*.

(Note: The pathname stated in the release notes for QlikView 12.10 were incorrect.)
